

# Moose

By: Jackson Peebles

A moose can grow up to 7 feet tall. An adult male is named bull. An adult female is named cow. A bull weighs up to 7500- kg. A cow weighs up to 545 kg. I will tell you about habitat travel diet discipline.

Where moose live. Moose live in northern Canada. Moose are found in northern forests. They are found in Nova Scotia. Their homes are small and in quiet places. Their homes are cozy

The word Moose is an Algonquin term means "Eater of twigs". They are herbivores! They are so tall so they have trouble eating grass. They eat leaves, berries and twigs.

Moose are a traditional food source for indigenous people living in its life. In eastern Canada they are hunted by groups like Metis. But do not mess with their kids.

A Bull's antlers start growing in April and by July. Growth is about 80 per cent complete can be up to 7 feet tall.

When I did this project because I love moose. They are going extinct. I like to think I live with a moose.
